FINAL GRADUATION PROJECT

Tech E-Commerce Platform

"Full-stack online tech store with admin dashboard"

PREPARED BY: **AHMAD ABDALLAH**

MARCH 2026

Project Idea & Overview

The Goal

Build a simple e-commerce platform where admin can manage products and customers can browse and add products to cart.

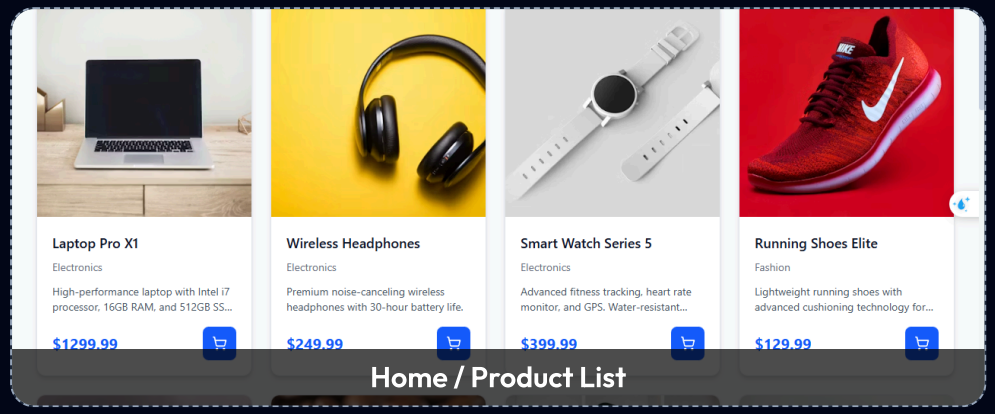
Problem Solved

Provides a lightweight, easy-to-use online store platform for tech products without complex user management.

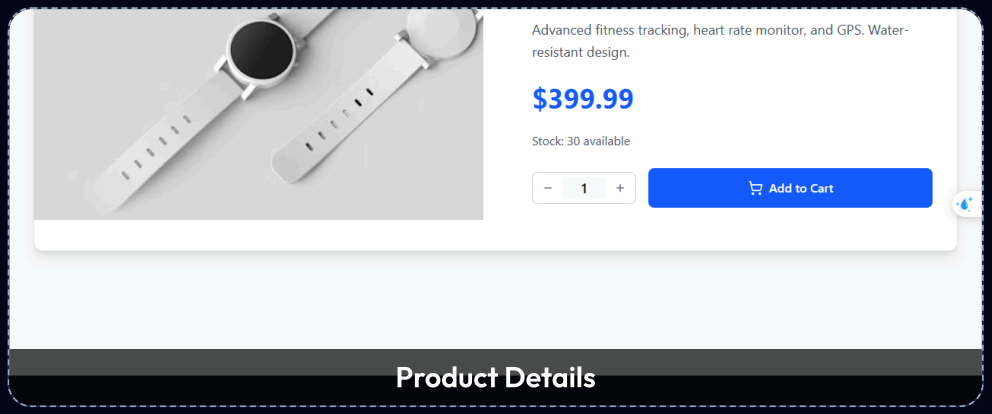
The Scope

- ✓ Admin CRUD for products
- ✓ Product catalog with categories
- ✓ Shopping cart (localStorage)
- ✓ Responsive Modern UI

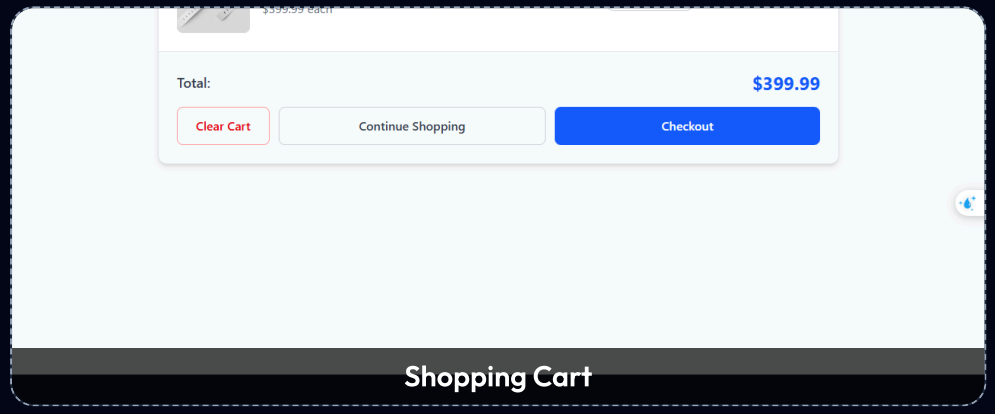
Design & UI Mockups



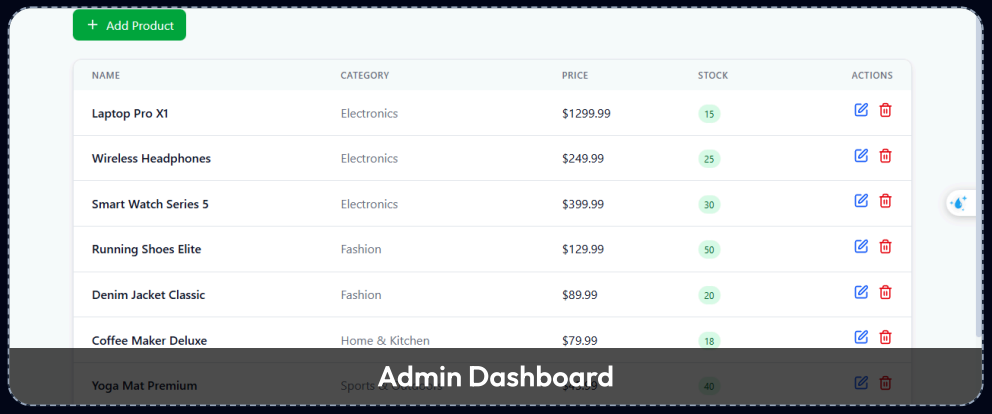
Home / Product List



Product Details



Shopping Cart



Admin Dashboard

Built with **Tailwind CSS** for a mobile-first, responsive experience.

Technology Stack

Frontend

React 19, Vite, Tailwind CSS, Axios, React Router

Database & Data Management

MySQL, Local Storage (Persistence), GitHub Raws

Key Platform Features

Catalog
Browse by categories & smart search.

Cart System
Persistent cart with LocalStorage sync.

Admin HUD
Full CRUD for product management.

Responsive
Mobile-first UI & auto-dark mode.

Details
Rich images, price, & specifications.

Toasts
Instant feedback for user actions.

Challenges & Solutions

CHALLENGE	SOLUTION
Deployment Issues (Node/MySQL)	Switched to Vercel/GitHub Raws + LocalStorage.
Cart Persistence	Implemented LocalStorage + Context API State.

Links & Demo

GitHub Repository

Live Demo

Reflection & Learning

- Full-stack dev (React + Node + MySQL)
- Frontend-backend RESTful API sync
- CRUD operations & State Management
- UI/UX skills with Tailwind CSS
- Persistence & Authentication logic
- Problem-solving & Debugging

Thank You!

Elevating Tech E-Commerce Standards
